WILLIAMS AND NORGATE.
1870.
# LIST OF PAPERS.

**ANDREWS, W., Esq., M.R.I.A.**

On *Ziphius Sowerbiensis* .............................. 67

**Baird, William, M.D., F.R.S., &c.**

Contributions towards a Monograph of the Species of *Annelides*
belonging to the *Amphinomacea*, with a List of the known
Species, and a Description of several new Species (belonging to
the group) contained in the National Collection of the British
Museum. To which is appended a short Account of two
hitherto nondescript Annulose Animals of a larval character.
(Plates IV., V., and VI.) .............................. 215

Remarks on several Genera of *Annelides*, belonging to the Group
Eunicea, with a notice of such Species as are contained in
Collection of the British Museum, and a description of some
others hitherto undescribed ............................ 341

**Blackwall, John, F.L.S.**

A List of Spiders captured by Professor E. PERCEVAL WIGHT,
M.D., in the province of Lucca, in Tuscany, in the summer
of 1863, with characters of such Species as appear to be new
or little known to Arachnologists. (Plates XV. & XVI.) .. 405

**Cambridge, Rev. O. P.**

Descriptions of a New Genus and Six New Species of Spiders.
(Plate IX.) ........................................... 264

Catalogue of a Collection of Ceylon Araneidea lately received
from Mr. J. Nietner, with Descriptions of new Species and
Characters of a new Genus.—Part I. (Plates XI., XII., XIII.) 373

Descriptions and Sketches of two new Species of Araneidea,
with Characters of a new Genus. (Plate XIV.) ............. 308

**Edward, Thomas, A.L.S.**

A few Additional Particulars regarding *Couchia Edwardii* .... 1

**Folin, Marquis Léopold de.**

Observations on the Septum of the *Cæcidae*; and some remarks
on the subject of the suppression of the Genera *Brochina* and
*Strebloceras* or *Phleboceras*. (Plate VIII.) .............. 254
GREEN, Ashdown H., Esq.
On the Natural History and Hunting of the Beaver (Castor canadensis, Kuhl) on the Pacific Slope of the Rocky Mountains.
With Supplementary Notes by Robert Brown, Esq., F.R.G.S. .................................................. 301

On the necessity of a Reform in the Generic Nomenclature of Diurnal Lepidoptera, illustrated by a Review of the Genera proposed from the time of Linnaeus to the year 1816 .......... 494

Lubbock, Sir John, Bart., V.P.L.S., F.R.S., &c.
Note on the Discovery of Planaria terrestris in England ........ 183

McIntosh, W. C., M.D., F.L.S.
Note on the Development of Lost Parts in the Nemerteaus.
(Plate VII.) .................................................. 251

On some new Forms of Trichopterous Insects from New Zealand; with a List of the Species known to inhabit those Colonies.
(Plate II.) .................................................. 196

Murray, Andrew, Esq., F.L.S.
On an undescribed Light-giving Coleopterous Larva (provisionally named Astraptor illuminator). (Plate I.) .......... 74

Contributions towards a Knowledge of the Curculionidae.—Part I. (Plates XVII., XVIII., & XIX.) ......................... 434

Saunders, Edward, Esq., F.L.S.
Descriptions of ten new Species of the Genus Paracopta, H. Deyrolle, and of ten new Species of the Genus Conognatha, Escholtze. (Plate X.) ................................................. 331

Theobald, W., Jun., Geological Survey of India.
Catalogue of the Reptiles of British Birma, embracing the Provinces of Pegu, Martaban, and Tenasserim; with descriptions of new or little-known species. .................. 4

Trimen, Roland, Memb. Ent. Soc. Lond.
On the occurrence of Astrapror illuminator, Murray, or a closely allied insect, near Buenos Ayres ....................... 503

Walker, Francis, Esq., F.L.S.
Catalogue of the Homopterous Insects collected in the Indian Archipelago by Mr. A. R. Wallace, with descriptions of New Species. (Plate III.) ....................... 82, 276

Wilson, C. A., Esq., F.L.S.
Note on Moloch horridus ........................................ 69
Thlaosoma dubium.

Fig. 25. Relative position of eyes.
Fig. 26. Perspective view of fore part of caput, falces, maxillae, and labium.
Fig. 27. Ditto of cephalothorax.
Fig. 28. Cephalothorax and abdomen from above and behind.
Fig. 29. Profile of cephalothorax and falces.
Fig. 30. Cephalothorax from above and behind, a more enlarged view.
Fig. 31. Leg of first pair.
Fig. 32. Underside, showing fore part of caput, falces, maxillae, and labium.
Fig. 33. Palpi and sternum, natural size.
Fig. 34. Profile of Spider, with legs removed, from a different specimen.
Fig. 35. Natural length.

T. distinctum.

Fig. 36. View of Spider, from above.
Fig. 37. Profile of cephalothorax and abdomen.
Fig. 38. Natural length.

Catalogue of the Homopterous Insects collected in the Indian Archipelago by Mr. A. R. WALLACE, with descriptions of New Species. By FRANCIS WALKER, Esq., F.L.S.

(Continued from p. 193.)

Fam. CICADELLINA, Burm.

Tribe LEVIPEDES, Amyot et Serv.

Subtribe CERCOPIDES, Amyot et Serv.

Gen. PHILAGRA, Stål.

287. PHILAGRA DOUGLASI, Stål, Trans. Ent. Soc. Lond. 3rd ser. i. 593.
Hab. Batchian.

Hab. Batchian.

Gen. CERCOPIS, Fabr.

Hab. Sumatra; inhabits also the Philippine Isles.

290. CERCOPIS PLANUS, Walk. Cat. Hom. iii. 653.
Hab. Penang; inhabits also Java.

291. CERCOPIS UNDULIFERA. Fam. Nigra, capite vitta incisa tes-
Male. Testaceous, stout. Head, thorax, and fore wings speckled with brown. Head conical, as broad as the thorax; vertex very much broader than long; front and face flat, piceous, the former bordered with pale yellow on each side. Pectus with two piceous stripes. Legs piceous. Fore wings with blackish speckles; a broad irregular blackish band extending from the base to full two-thirds of the length. Hind wings cinereous, hyaline; veins black. Length of the body 2 lines, of the wings 4 lines.

Hab. New Guinea.

Order PHYTOPHTHRISES, Burm.

Fam. PSYLLIDÆ, Latr.

Gen. CARSIDARA.

Mas. Corpus sat robustum. Caput thorace angustius, supra excavatum. Antennæ gracillimi, corpore breviore; articuli 1° et 2° incrassati. Pedes breves, robusti. Ala antice corpore multo longiore, vena longitudinali ramos quatuor emittente apicem versus arcuata, ramis 1°, 2°, 3°que furcatis. Ala postice venis duabus longitudinalibus gracillimis.

Male. Body moderately stout. Head narrower than the thorax, depressed above. Antennæ very slender, shorter than the body; first and second joints incrassated; third, fourth and fifth successively shorter; sixth and seventh as long as the fifth; eighth longer than the seventh. Legs short, stout. Fore wings much longer than the body, with a vein which emits four branches and is curved at three-fourths of the length to the hind border near the tip; first branch emerging near the base, forked, its fore fork short, joining the stigma, its hind fork long, joining the costa beyond the stigma; second branch emerging very near the base, joining the hind border at much before the middle; third emerging beyond the first, joining the hind border close to the second, emitting near its tip a short curved fork to the hind border; fourth straight, emerging opposite the stigma, proceeding obliquely to the hind border. Hind wings with two very slender longitudinal veins.

442. CARSIDARA MARGINALIS. Mas. Testacea, capite lituris duabus lateralis ferrugineis, antennis albidis articulis 1° et 2° ferrugineis, 3° et sequentibus apice nigris, prothorace guttis duabus lateralis ferrugineis, mesothorace ferrugineo vittis quinque (quattuor interruptis)
pallide flavis, abdomine pedibusque fulvis, tibiis pallide flavis, alis
diaphanis testaceo venosis, alis anticis quatuor punctis fuscis stigmate
albido basi apiceque nigro.

Male. Testaceus. Head with a ferruginous mark on each side between
the eyes. Antennae whitish; first and second joints ferruginous; all
the following joints black towards the tips. Prothorax with a ferru-
ginous dot on each side. Mesothorax ferruginous, with five pale yellow
stripes, of which the middle one only is entire. Abdomen tawny,
pale yellow beneath. Legs tawny; tibiae pale yellow. Wings pellucid;
veins testaceous. Fore wings with a whitish stigma, which is blackish
at each end; four brown dots along the hind border. Length of the
body 1½ line, of the wings 5 lines.

Hab. Celebes.

Genus Tyora.

Mas. Corpus gracile. Antennæ gracies, filiformes, thorace multo
longiores; articuli 1st et 2nd incrassati. Pedes robusti, brevius-
culi. Antec antica angustae, venis tribus longitudinalibus basi
connexis, 1st vittas duas ad costam emittente, 2nd vittas tres ad
marginem posticum emittente.

Male. Body slender. Antennae slender, filiform, much longer than
the thorax; first and second joints incrassated. Legs stout
rather short. Fore wings narrow, with three longitudinal veins
which are connected near the base; first vein emitting an ob-
lique vein and an exterior short directly transverse vein to the
costa; second vein emitting three oblique veins to the hind
border (of these secondary veins the first and second are
connected by a transverse vein, third vein extending obliquely to
the hind border).

443. Tyora congrua. Mas. Fulva. capite subtus pallide flavescente,
 thorace flavescente sexvittato. alis hyalinis subcinereis fulvo venosis.

Male. Tawny. Head pale yellowish beneath. Thorax with six pale
yellowish stripes, the two exterior stripes broader than the others.
Wings hyaline, slightly cinereous; veins tawny. Length of the body
1½ line, of the wings 4 lines.

Hab. Mysol.

Fam. COCCIDÆ, Latr.

Gen. Monophlebus, Leach.

Hab. Batchian; Celebes; Gilolo. Inhabits also Hindostan.
