## INTRODUCTION.

---

THE object of the present Supplementary Catalogue has been to give a complete list of the specimens of Homopterous Insects contained in the collection of the British Museum, received since the printing of the former Catalogue, indicating at the same time the peculiarities of each, as regards variation of character, locality, and the source from whence it has been derived. With this view, the different individuals of each species contained in the collection are indicated by the letters *a*, *b*, *c*, &c., following the name of the species and its synonymes, and a description is given, if it appears to have been before undescribed.
